SUMMARY

Full-stack software engineer with 3+ years building AI-powered, production-grade applications in Python, React, and Svelte, integrating RESTful APIs and cloud infrastructure. Currently a founding engineer driving end-to-end feature delivery, data quality, and AI systems for enterprise automotive clients. Proven record of high ownership across the full development lifecycle — architecture, deployment, and cross-functional collaboration — and of quickly mastering new technologies to ship production-level code from day one.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, C, SQL, HTML, CSS

Frameworks & Libraries: React, Svelte, SvelteKit, Node.js, Express, Flask, FastAPI, LangGraph, CrewAI, Supabase

AI & Machine Learning: OpenAI API, Claude Code, Gemini, Google Speech-to-Text, Agentic AI Workflows, Multi-Agent Systems

Cloud & DevOps: Google Cloud Platform (GCP), Cloudflare, AWS (Cloud Practitioner Certified), Azure, Vercel, Railway, GitHub CI/CD

Data & Integration: REST APIs, SFTP data pipelines, CRM/DMS Integrations, SQL query optimization, Progressive Web Apps (PWA)

Methodologies & Collaboration: Git, Agile, Scrum, Jira/Rally, Miro, Microsoft Teams

WORK EXPERIENCE

Founding Engineer — DriveUpSales.ai

April 2026 — Present

AI sales-enablement platform for automotive dealer groups, including Kunes, the largest dealer group in the Midwest.

- As a founding engineer, own end-to-end delivery of client-requested features across a Python and SvelteKit full stack, deployed on GCP and secured via Cloudflare — wearing product, engineering, and data roles.
- Architected a unified data layer connecting dealership call-tracking, CRM, and inventory systems (CallRevu, VinSolutions, Auto/Mate, DriveCentric, Dealertrack, vAuto, and others) into a single source of truth.
- Built AI systems that transcribe and score every sales call using Google Speech-to-Text and LLMs (Gemini, OpenAI), auto-generating rep coaching summaries and powering the DUS Assistant — a per-rooftop AI copilot for reps, managers, and admins.
- Developed automatic customer-profile creation and real-time inventory matching that resurfaces dead leads as new deals when a previously wanted vehicle lands on the lot, plus manager-facing dashboards for full visibility into rep activity.
- Helped secure the company's first paid pilot, contributing roughly \$12,000 in initial revenue.

Software Engineer — OptumRX, UHG

July 2024 — April 2026

Position eliminated due to offshoring restructuring.

- Owned continuous production enhancements to a Python-Flask internal application directly responsible for over \$80M in annual revenue.
- Architected a LangGraph-powered multi-agent AI workflow that coordinated 4 teams and cut client processing time by 2–3 business days, ingesting multi-format data (PDF, SQL, JSON) via a supervisor agent orchestrating 4 specialized sub-agents into normalized, analysis-ready outputs.
- Connected 2 cross-functional teams by integrating partner internal applications with the core underwriting platform, eliminating redundant workflows and reducing duplicated effort across both units.
- Led technical onboarding and mentorship for 3–5 engineers as internal tech lead, running bi-weekly sessions to accelerate ramp-up and align individual work with team delivery goals.

PROJECTS

Portfolio Website | mitchelrifae.com — React/Vite site on Vercel with GitHub CI/CD, integrating a Gemini-powered AI chatbot via a custom RESTful serverless API that answers visitor questions about my experience and projects.

EDUCATION

B.S. Computer Science, Virginia Tech College of Engineering

August 2020 — December 2023

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services | Issued Feb 2024, Expires Feb 2027
